

What is an IT Assessment?

MADE FAST AND SIMPLE

An IT assessment is a review of a company's environment and technology systems, which allows us to provide a personalized proposal with recommendations, in plain English everyone can understand. An IT assessment generally only takes 30-minutes.

SITE VISIT & INTRODUCTION

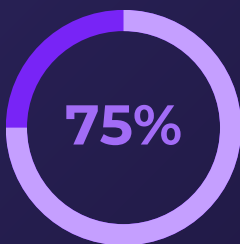

We briefly meet your team, identify pain points with your IT environment and complete a quick tour of your office.

END-USER PROCESS REVIEW

We've found that end-user support and troubleshooting can suffer when internal teams become overwhelmed. That's why we'll identify end-user challenges, process efficiencies or inefficiencies, and document recommendations that will help your team streamline their support and improve everyone's tech experience.

NETWORK ASSESSMENT SCAN

A. Identify – Our engineer will complete a non-intrusive network scan to identify computers, servers, routers, access points, and business applications that your current infrastructure supports. We'll uncover hard to detect issues, measure risk and check for security vulnerabilities (if any). This process takes 15 Minutes.

B. Analyze – Next our team reviews this information gathered during the network assessment scan to provide your team with an accurate and personalized proposal within 48 hours based on the specifications of your unique IT environment.

C. Recommend – What are experts good for if they don't provide valuable insight and recommendations? We have your best interest in mind which is why we will provide detailed recommendations to improve security, productivity, and prevent costly downtime.

PROPOSAL REVIEW MEETING

The last step in our process is to meet with your team to review your IT assessment. We'll review our Managed IT service offerings as they relate to your proposal, the supportability of your network, recommendations, and any vulnerabilities found. We will answer any and every question your team might have.

WHY IS A NETWORK ASSESSMENT IMPORTANT TO YOUR BUSINESS?

ACCURATE PROPOSALS

Our Managed IT Services vary depending upon the number of users, devices, servers, and applications that need to be supported. Without a network assessment, we cannot provide a truly accurate proposal.

VALUE-ADDED INTELLIGENCE

Many Managed Service Providers (MSPs) charge between \$500 to \$1000s for a similar network assessment. Even if you decide not to work with Next Perimeter, your team will better understand their strengths, weaknesses, and opportunities.

DISCOVER VULNERABILITIES

Most SMBs do not have dedicated cybersecurity professionals, yet every organization today of virtually every size has network security concerns. We will let you know what vulnerabilities need to be remediated to protect your business and valuable assets.

LONG-TERM PLANNING

Even if you already have an in-house IT department, you can benefit from an outside perspective when it comes to planning things like your disaster recovery, business continuity, or future objectives

WHAT SETS US APART?

It All Starts in the Cloud

Your .com is what ties your business to the web, allowing you to get your email and collaborate online. Whether you're using Google Workspace or Microsoft 365, Next Perimeter has you covered. Your team can leverage our certified experts for matters concerning your email deliverability, DNS records, licensing concierge, and more.

Your Team and Workstations are Fully Covered

When your team logs into your corporate environment today, what types of protections exist? Next Perimeter, by default, deploys endpoint security and hardware monitoring to every workstation that we manage, ensuring productivity is at an all-time high. Your team will enjoy unlimited round-the-clock support for everyday issues ranging from authentication to hiccups with their equipment.

Battle-Tested SOPs

Whether we will handle all of your IT, or collaborate with an internal team, our procedures have been perfected against millions of business scenarios. Our system has been trained to adapt to each customer as their organizations evolve.

Future-Proofed for Compliance

We know you want your cybersecurity to be reliable, predictable, functional, and cost-effective - that's why we've simplified cyber so it's back-of-mind. By signing up for Essentials, you've created a predictable path toward future compliance needs as our agents can fulfill virtually all requirements they might ask for with simple per-user/device pricing.
